DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 10-18, 28, 30 and 38, drawn to an integrated circuit chip module, classified in class 257, subclass 528.
 - II. Claims 28 and 30, drawn to a decoupling capacitor assembly used for decoupling integrated circuit die, classified in class 257, subclass 532.
 - III. Claims 32-37, drawn to a method of forming an integrated circuit chip module, classified in class 438, subclass 109.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions (I, II) and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, Invention Group I could be made by another different method. For example, Invention Group (I, II) could be made without adhesively securing the decoupling capacitor assembly onto an integrated circuit die mounted onto a substrate.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 2822

case: the subcombination, decoupling capacitor assembly maybe used in devices other than an integrated circuit chip module.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and Group (I, II) is not required for Group III, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
